ACCESSING OUR TECHNICAL BROCHURE PRESENTATION

- <https://skfb.ly/onnTq>
- You can click on this link to be redirected to a platform called Sketchfab. You are not required to create an account to use sketchfab.
- You can access this link by desktop (web), or by app. You can download the Sketchfab app for free and you are not required to register any account.

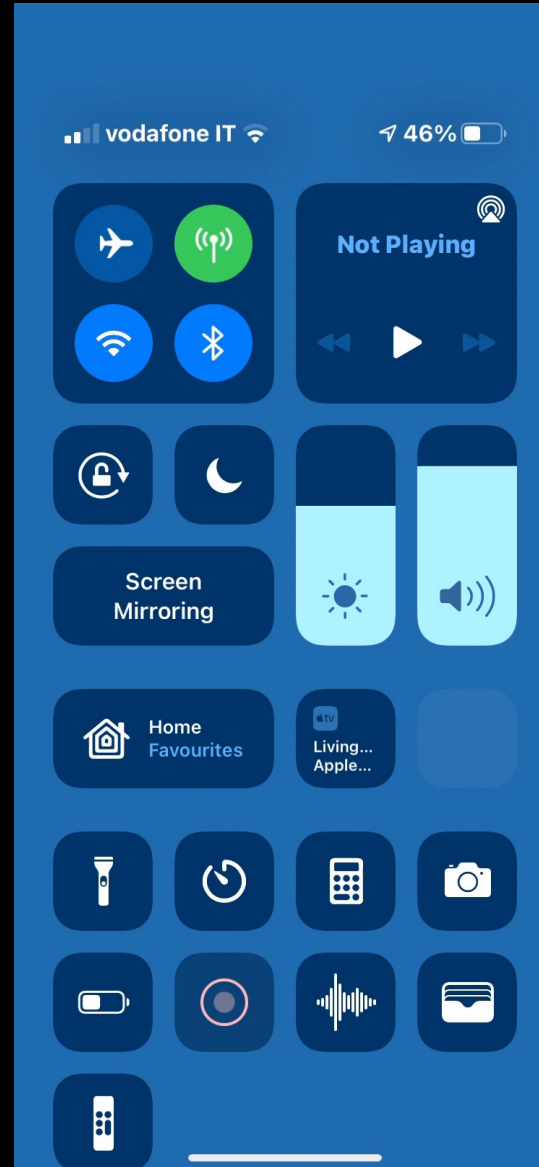

OPERATING THE MODEL

- <https://help.sketchfab.com/hc/en-us/articles/202509036-Interface-and-Options>
- The APP version (best performance on tablets) can also work to show the mask in Augmented Reality → you visualize the masks model in 3D in the environment where you are. You can navigate it by moving your device, zooming inside, hovering around etc.

Please note – the APP version requires you, to find the model, to deactivate in settings “Filter high polycount models”.

Here you will find useful information regarding operating the model – HAVE FUN!

Neptune III comes inside a backpack specifically designed for OCEAN REEF Scuba divers in mind. Designed by divers, for divers.

[Link to external Package presentation.](#)

Neptune III will be sold in 3 different “set” configurations:

- IDM only
- System (IDM+standard hose+first stage)
- Package (IDM+standard hose+QC hose+QC Octo+first stage+pressure gauge+BUMP)
- All of these sets and equipment are EN250:2014 certified

The Neptune III visor is all new and designed from scratch – it offers the widest field of vision of any conventional and any Full-Face mask existing. The Neptune III visor surpasses the Space's field of vision by +10%. The choice of an uncommon vertical body regulator was a conscious design choice to push vertical vision to its maximum potential. Reading instrumentation and operating your equipment with a FFM has never been easier.

[Animation: POV from inside the mask](#)

[Animation: all disappears except orinasal.](#)

The whole internal volume had to be redesigned – so we also engineered a new orinasal pocket. While passing with flying colors EN CO2 tests, this pocket is also the most anatomically designed on the market. New pocket + new visor combine for minimal dead air space & minimal internal volume: Neptune III is 13% less buoyant than Neptune Space, offers an internal volume 24% smaller than competition and is a whopping 47% less buoyant than the other FFMs on the market.

Vertical body, balanced, all new, Neptune III regulator delivers shocking smooth breathing at any depth. This IDM breathes +33% better than our Neptune Space.

Want complete peace of mind that your regulator will not ever free flow? Well, we have added a Dive-PreDive lever. Just to give you the option of full control over your 2nd stage. [Animation: dive-predive lever rotation](#)

Our Fast Release Buckles and Quick Release tabs have always been well received as easy to use, efficient and safe. We wanted more. We have designed a new Quick Release System : 2 new wider tabs with rough surface to operate 2 handed doffing better; even with thick gloves. Also, these tabs can mount the included accessory: One-hand Doffing Handle. This handle is negatively buoyant, designed in the shape of the mask (not in your way or evidently “dangling”), while easy to grab and to pull on to remove the mask swiftly. The Neptune III is now the only FFM that you can effectively and comfortably doff with one hand.

Often our products have been considered “too beautiful” – so, we decided to engineer the Neptune III with a more obvious toughness factor. The regulator cover as well as the exhalation and purge button are molded out of specific impact absorbing materials. Whilst still sexy, you can be sure this mask is built for a demanding environment.

The new 2nd stage has been designed to be fully integrated – as per OCEAN REEF philosophy, making it the smallest profile second stage of any Full-Face Mask. It's not bulky on your chin; no exhaling bubbles in your line-of-sight and no getting stuck while moving your head left and right. Also, it is now fully and easily detachable (level 1 training required) for quick servicing, easy swapping.

Introducing the SAV III – while designing the IDM we decided to improve our professional surface air valve as well. Now with a new design, better grasping surface and an internal valve. The mask will not fog when not connected to the cylinder and water will not drip in if you forget the valve open when submerging your head.
